

VISCODERM®

Curing the skin from the inside out...

VISCODERM® is one of the most representative and complete BRANDS in the aesthetic market, offering targeted solutions and specific protocols, able to meet the doctors needs in reducing the effects of the aging process of the skin.

MULTIACTION SKIN RENOVATION SYSTEM

guaranteed by excellent tolerability, clinically proven performance and IBSA's FDA approved, SHYALT ultrapure hyaluronic acid raw material.

VISCODERM® hydrobooster

The two expressions of hyaluronic acid

VISCODERM® hydrobooster is a stabilized hyaluronic acid injectable tool able to offer a dual function; a biological process of hydration and tissue restructuring, together with a mechanical action to stretch the most superficial wrinkles, in a precise and natural way, resulting in its unique HYDROSTRETCH action.

HYDROSTRETCH action is made possible by the rheological properties of VISCODERM® hydrobooster; the low gel stiffness and viscosity and high deformability guarantee optimal tissue integration and its use in different levels of the dermis, up to the most superficial layers. For this reason VISCODERM® hydrobooster is particularly effective on the dynamic areas of the face (perioral, periocular and forehead).

PRIMARY EXPRESSION

DEEP HYDRATION

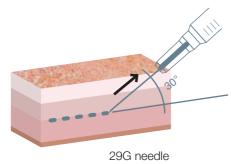

Improving elasticity, radiance and smoothness of the skin.

Biorestructuring activity prolonged over time and safety guaranteed by the specific formula.

DEEP HYDRATION

MICROLINEAR RETROGRADE OR MICROBOLUS TECHNIQUES

Inject VISCODERM® hydrobooster in the mid-deep dermis, using either the **micro**linear or **micro**bolus techniques (<0.05 ml each) in the areas of the face requiring deep hydration (malar/submalar areas). A light massage is recommended after the treatment for optimal results.

BEFORE

1 MONTH AFTER THE 1ST TREATMENT

Patient 1

Glogau Scale Type 1, initial signs of wrinkles in the malar area.

PROTOCOL

2 treatments with a 2 month interval, repeat 2 times per year

SECONDARY EXPRESSION

SUPERFICIAL STRETCHING

Stretching superficial wrinkles for those with moderate to advanced signs of aging (Glogau Scale Type 2 & 3).

Particularly indicated for the dynamic areas of the face (perioral, periocular, forehead).

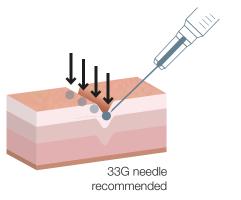

SUPERFICIAL TECHNIQUES

SUPERFICIAL ACTION

MICRODROPLET TECHNIQUE

Microdroplet injections (<0.01 ml each) along the path of the wrinkle. A light massage is recommended after the treatment for optimal results.

Particularly indicated for those with Type 2 aging according to the Glogau Scale (wrinkles in motion).

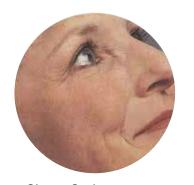

Glogau Scale
Type 2: wrinkles in motion

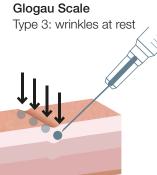

DUODYNAMIC TECHNIQUE

This combined technique is indicated for patients with advanced signs of aging - Glogau Scale Type 3 (wrinkles at rest).

Begin with the **micro**linear retrograde technique (<0.01 ml) below the path of the wrinkle (support), followed by **micro**droplet injections (<0.01 ml) on the same wrinkle (stretch). A light massage is recommended after the treatment for optimal results.

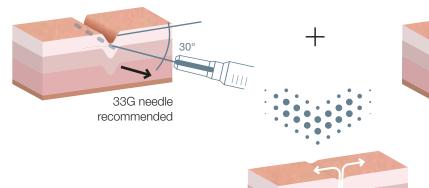

33G needle

STRETCH ACTION

Patient 2
Glogau Scale Type 2, with a slight presence of forehead wrinkles.

PROTOCOL

2 treatments with a 2 month interval, repeat 2 times per year

Patient 3
Glogau Scale Type 3, with a visible presence of wrinkles in the periocular area.

PROTOCOL

2 treatments with a 2 month interval, repeat 2 times per year

RHEOLOGY & CLINICAL EVALUATIONS

ACNE SCARS CORRECTIVE ACTION

TECHNIQUE

Technique requiring an initial detachment of the underlying tissue and subsequent filling of the area with a bolus proportional to the scar depth.

This technique lifts the scar depression, while promoting the repair of dermal fibrosis.

29G needle recommended

REFORE

R MONTHS AFTER THE 2ND TREATMENT

RHEOLOGY SUPPORTS THE INDICATIONS

VISCODERM® hydrobooster comparison study

VISCODERM® hydrobooster

CLINICAL EVALUATION

Statistically significant results confirm the aesthetic performance and duration on dynamic wrinkles (forehead lines, crow's feet wrinkles, vertical lip lines) and static facial lines (nasolabial fold, marionette lines) up to 5 months after baseline.

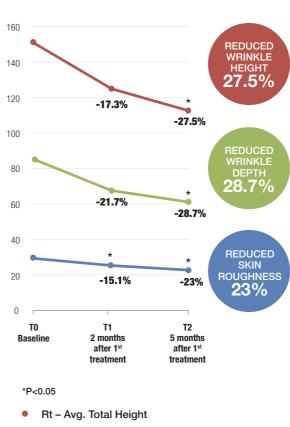

Single center study on 18 female subjects (avg. age 49)

PERIOCULAR WRINKLE IMPROVEMENT

INSTRUMENTAL ANALYSIS:

Statistically significant improvement lasting 5 months after the 1st treatment

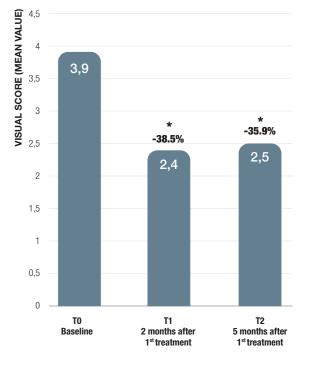

Profilometric Analysis µm (mean value)

- Rv Max Depth
- Ra Avg. Roughness

CLINICAL ANALYSIS:

Clinical improvement of at least 1 grade on 100% of the subjects according to the Crow's feet reference photographic scale

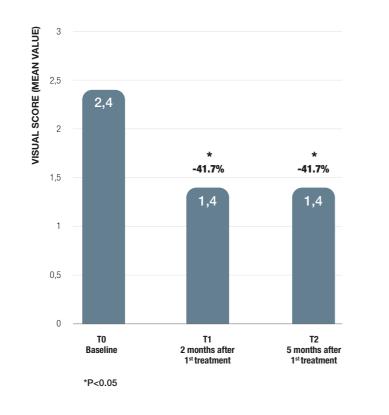

*P<0.05

PERIORAL (BARCODE) IMPROVEMENT

CLINICAL ANALYSIS:

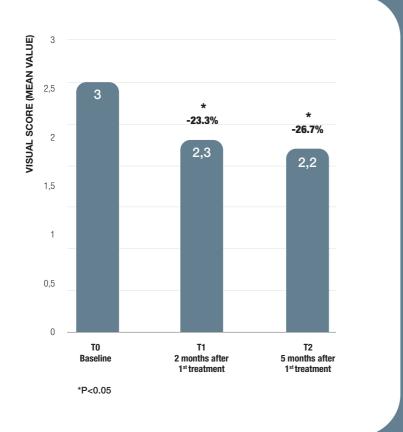

Clinical improvement of at least 1 grade on 86% of the subjects according to the NARINS reference photographic scale

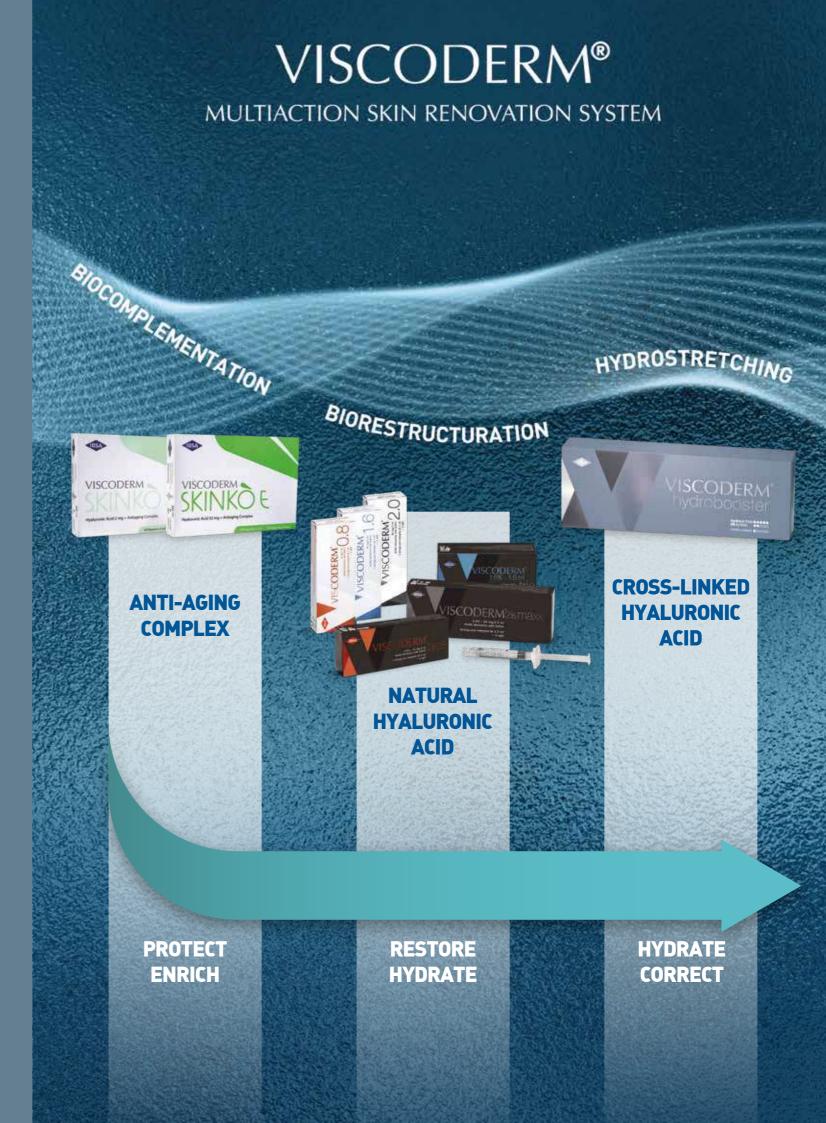

SURFACE MICRORELIEF IMPROVEMENT

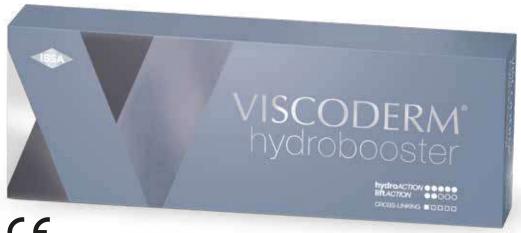

CLINICAL ANALYSIS:

Clinical improvement of at least 1 grade on 71% of the subjects according to the BEAGLY GIBSON reference photographic scale

VISCODERM® hydrobooster is 25 mg of cross-linked Hyaluronic acid. Medical device (€ class III available in a 1.1 ml READY TO USE, GLASS, PRE-FILLED SYRINGE WITH 2 NEEDLES 29G x 13 mm.

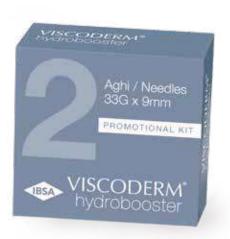

PROMOTIONAL KIT

CONTAINS 2 STERILE TSK NEEDLES 33G x 9 mm

SPECIFICALLY INDICATED FOR SUPERFICIAL INJECTION TECHNIQUES

IBSA Farmaceutici Italia s.r.l. Via Martiri di Cefalonia, 2 - 26900 Lodi - ITALY
